Foreword

This document revises the version dated 24 September 1996 by incorporating the substantive changes approved by ISO WG21 and ANSI\(^{\dagger}\) X3J16 at their joint meeting in Kona, Hawaii, USA in November, 1996. It will be submitted to ISO SC22 for registration as the second Committee Draft (CD) produced by WG21.

The C language changed substantially after *The C Programming Language* was published. Those changes are reflected in ISO/IEC 9899:1990, *C Standard* which, together with Chapter R of *The C++ Programming Language*, serve as the two base documents for this Working Paper.

Most clause and subclause titles have text in square brackets at the end of their respective lines. The bracketed text is a *symbolic name* for that clause or subclause, with the idea that the symbolic name will remain constant even if the corresponding number changes in subsequent drafts. These symbolic names are there for convenience only and are not part of the text; they will not appear in the final version of the International Standard.
