
Concept

Operating-System Engineering

Educational Objectives

- an excursus on modern operating-system design *and* implementation
  - focusing on system-software flexibility, portability, and scalability
- the use of software-engineering techniques in system-software design
  - feature modeling [3]
  - program families [5]
  - object orientation [8]
  - aspect-oriented programming [4]
- an inauguration into the secrets and a rationale of PURE [1]

Subject Matter

introduction . . . . . a first problem analysis

fundamentals . . . . . domain analysis, program families, and object orientation

case study . . . . . design and development of TAL, a *threads abstraction layer*

discussion . . . . . things nice to have and not to have

revision . . . . . aspect orientation

conclusion . . . . . lessons learned

Prerequisites

- structured computer organization, **operating systems**
- C/C++, assembler
- enjoy system-level programming
- no fear of stuff hard to digest
- some sort of **staying power**

Syllabus

- one **lecture** per week, two hours each . . . . . 2 SWS
  - subject presentation
- one **seminar** per week, two hours each . . . . . 2 SWS
  - subject consolidation
  - practice discussion
- computer **practice** N hours per week, $0 < N \leq 164$ . . . . . 0 SWS

Achievement Control

- **practice** or
  - *pass* . . . . . in case of successful elaboration of all exercises
  - *consultation* . . . . . in case of unsuccessful elaboration of one exercise
  - *fail* . . . . . otherwise, or enjoy . . .
- **examination** on lecture *and* seminar stuff

Academic Staff

- Wolfgang Schröder-Preikschat . . . . . professor
  - `http://www4.informatik.uni-erlangen.de/~wosch`
- Olaf Spinczyk . . . . . assistant
  - `http://www4.informatik.uni-erlangen.de/~spinczyk`
